erwin Data Intelligence Benefits according to Real Users

Maximilian T.
Business Intelligence BA at a insurance company with 10,001+ employees

★★★★⯪

"We believe that we are the envy of other departments that are not using erwin Data Intelligence. For them to conduct an impact analysis takes perhaps a few minutes or even a few hours, whereas, for us, it takes less than one minute to complete."

"erwin Data Intelligence's data cataloging, data literacy, and automation have helped our decision-makers because when a source wants to change something, we immediately know what the impact is going to be downstream."

Manoj N.
Practice Director - Digital & Analytics Practice at HCL Technologies

★★★★⯪

"erwin Data Intelligence's data cataloging, data literacy, and automation have reduced a lot of complexities by bringing all the assets together and making sense out of them. It has improved the collaboration between stakeholders a lot. Previously, IT and business were separate things. This has brought everybody together. IT and business understand the need for maintaining data and having ownership for that data. Becoming a data-literate organization, with proper mechanisms and processes and tools to manage the most valued assets, has definitely increased business in terms of revenues, customer service, and customer satisfaction."

Advisor Application
Architect at CPS Energy

★★★★⯨

"erwin Data Intelligence has provided more profound insights into legacy data movements, lineages, and definitions in the short term. We have linked three critical layers of data, providing us with an end-to-end lineage at the column level."

Data Architect
at a insurance company with
5,001-10,000 employees

★★★★⯨

"The biggest impact for us is that erwin generates DDL extremely quickly. We're able to pull in metadata, map it to a target, generate DDL to create the tables, and generate SSIS packages. Previously, especially going back 10 to 15 years ago, hundreds of hours had to be spent to manually perform these tasks. This solution completely automates it and gets it 90% done. We can then pass it off to a developer to create the items in SSIS."

Senior Director
at a retailer with
10,001+ employees

★★★★☆

"Because we enabled self-service for different business analysts, it has improved the speed. It has easily reduced at least 20% of the time that my IT team had to spend answering questions from different business teams. The benefit is probably even more for business teams, and I think they are faster by at least 30% in terms of being able to get the data that they need and perform their analysis based on that. I would expect at least 25% savings in time."

"By using the data catalog, we have definitely improved in terms of maturity as a data-driven decision-maker organization. We are now getting to a level where everybody understands the data. Everyone understands how it is organized, and how they can use this data for different business decisions."
