

Transform into a database monitoring superhero with Foglight Cloud!

Foglight Cloud is a managed software solution that provides you with extensive diagnostic and performance monitoring superpowers for databases, servers, virtual machines, containers and cloud services.

Just look at the mighty seven superpowers you will gain to fight Chaos and maintain the health and performance of your database ecosystem...

1

Reap scalability by monitoring all your business-critical databases

2

Gain observability into all your database infrastructures wherever they are — in the cloud, hybrid, virtual and on-premises

3

Reduce Total Cost of Ownership (TCO)

Cut on-premises infrastructure costs for immediate and ongoing savings

4

5

Realize an immediate ROI and impact on your organization's performance

Get access to the latest features with zero downtime

6

7

Enhance your security and performance with automatic updates

Read our eBook: **Guide to Battling Chaos in Your Database Environment** or request a demo today at [Quest.com/Foglight-Cloud-Demo](https://quest.com/Foglight-Cloud-Demo) to see the superpowers in action.
