Quest Software Introduces the Quest Trusted Data Management Platform Featuring the Automated Data Product Factory

PRESS RELEASE

Quest Builds an Automated Factory to Manufacture Enterprise Trust in Data

Analyst(s): Brad Shimmin
Publication Date: February 24, 2026

All enterprises are fighting a common problem

The old way of managing data isn't scaling

Complexity

Large enterprises manage thousands to tens of thousands of data pipelines

Consequence

The result is slow, expensive data delivery and missed business value.

Cost

Annual Total Cost of Ownership can reach \$60M - \$500M¹.

1. Metrics and statistics shown are based on Quest Software's internal analyses and have not been independently verified by a third party.

The Complexity and Cost of Delivering Trusted Data for AI is Real

Introducing the industry's only end-to-end solution –

from data modeling to AI-ready data

Data Quality

Governance

Function

Days vs Months

The Quest platform automates siloed processes, transforming fragmented data into trusted data products.

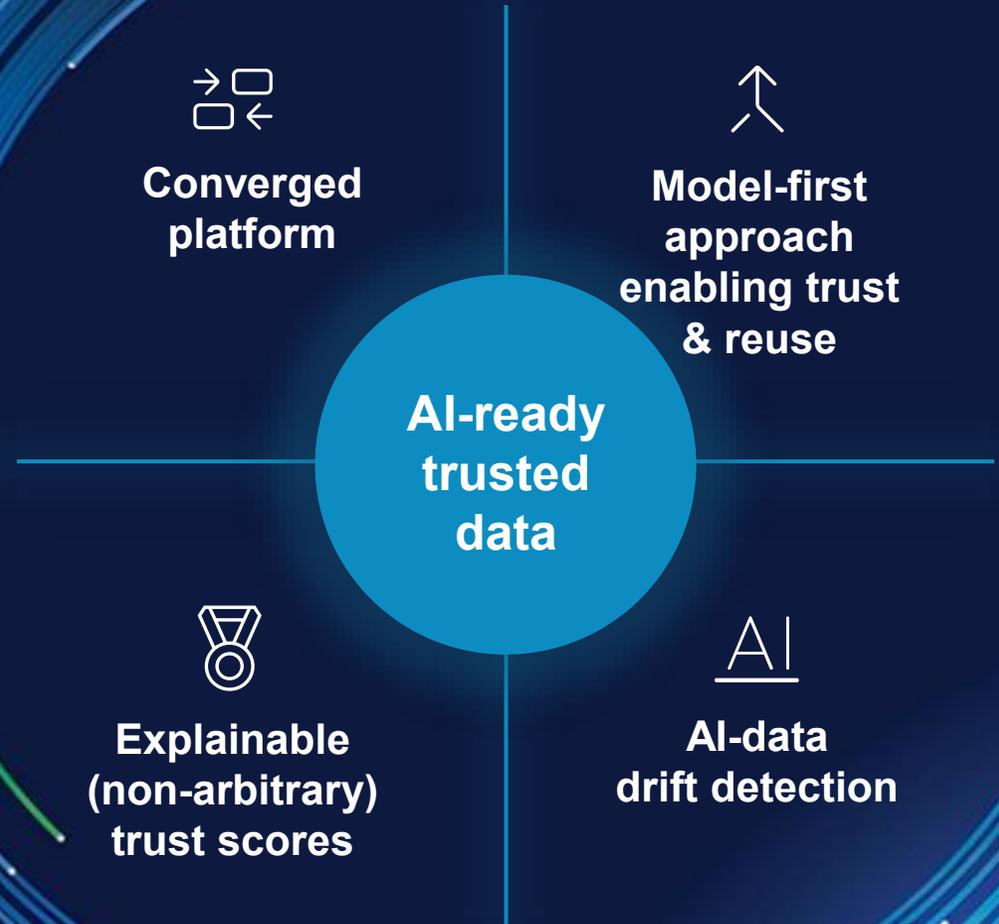

That financial services firm saved 750 days of work and \$360K per data product created and accelerated delivery to days vs months.

Team size

Human time
to create data

Quest Trusted Data Management Platform

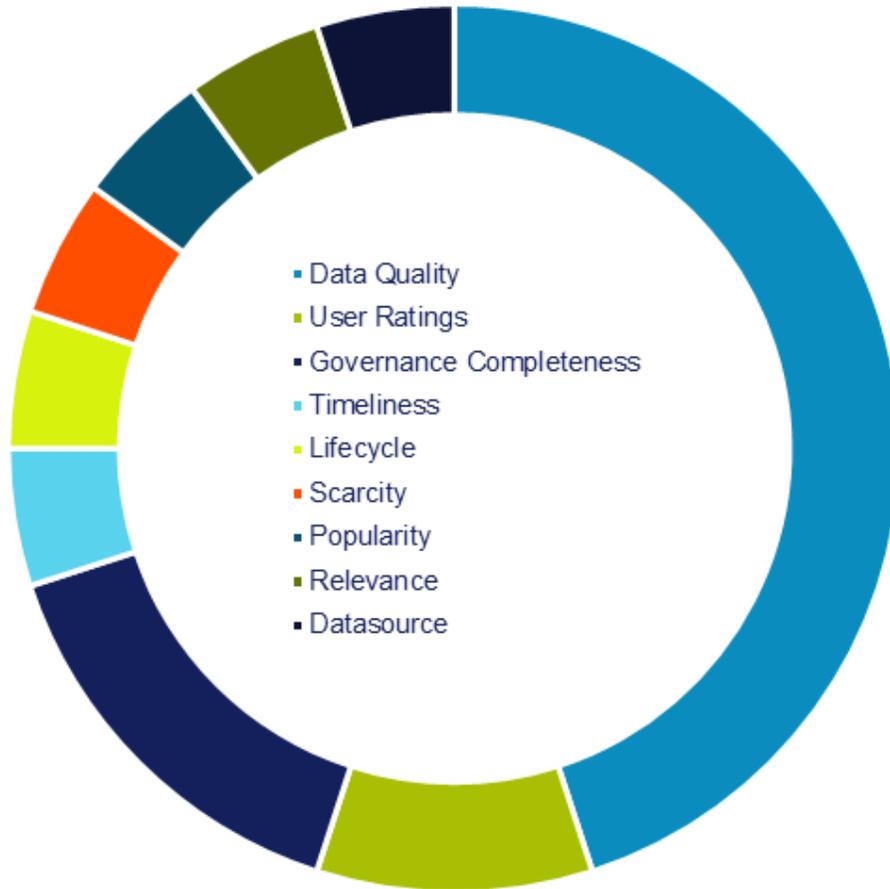

Fully automated with game-changing capabilities

Explainable Trust Scoring

(That actually means something)

Our 9-Component Trust Score Framework

Dynamic Monitoring

Trust scores reflect the current state of your data ecosystem, not outdated snapshots.

Customizable For Your Needs

Personalize which trust components matter and their weighted influence on the composite score.

Embedded Coverage

Trust scoring built into the platform so that if the data changes, the trust score adjusts with it.

The Bottom Line

The Quest Trusted Data Management Platform provides the industry's most comprehensive trust scoring model. It allows data consumers within your organization to instantly identify the trustworthiness of the data for AI success.

Data Products = Data Value

Reusable

Built once, consumable many times

Meaningful

Carries meaning in business terms

Trustworthy

Backed by governance, quality, lineage, observability

Discoverable

Easy to find in catalog/marketplace

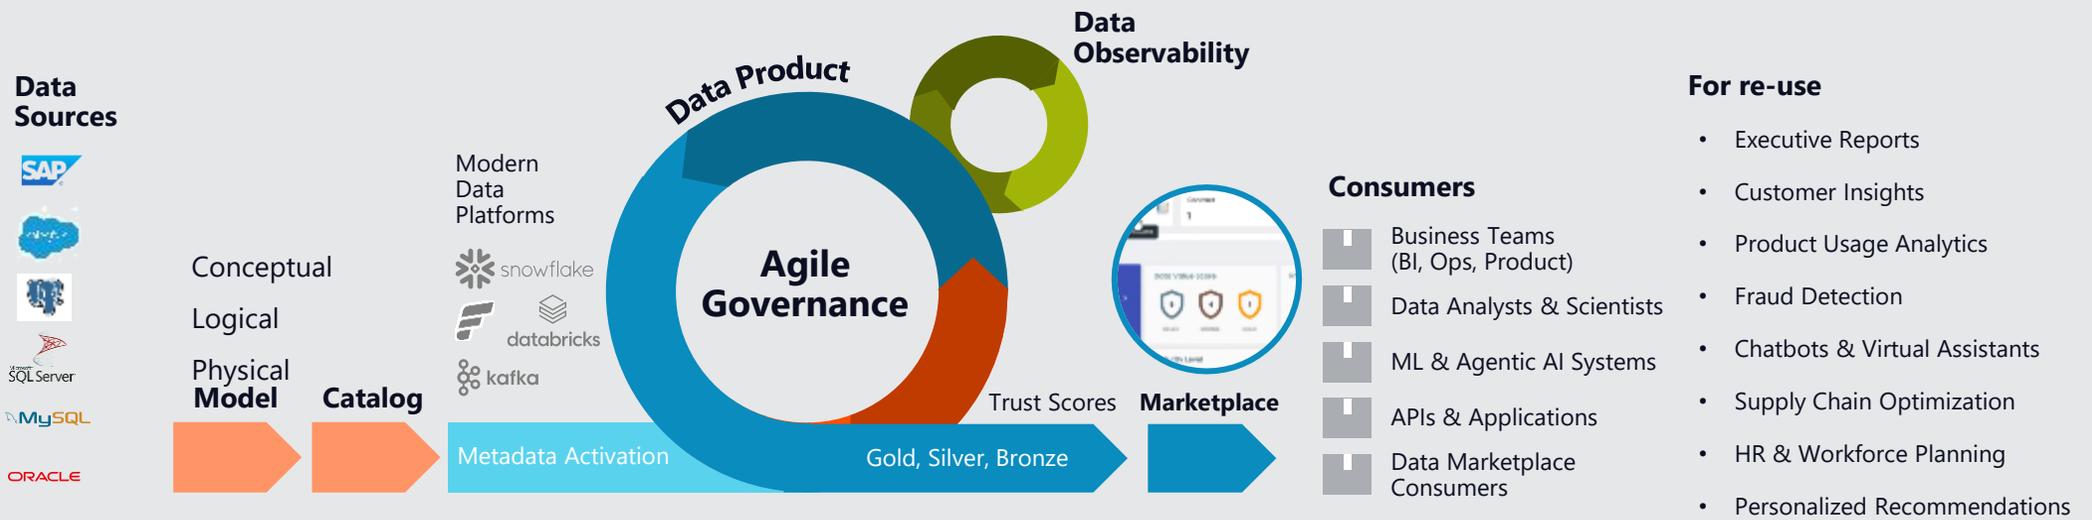

Accessible

Usable across teams, AI, and apps

Composable

Can be combined with other products to create new value

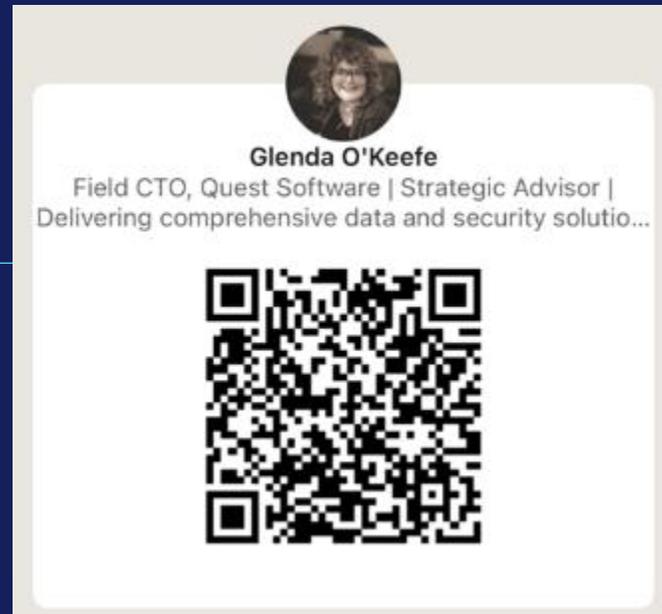

Anatomy of a Data Product from raw source to marketplace
