

Change Auditor for SharePoint

SharePoint, SharePoint Online/Office 365 and OneDrive for Business auditing tool tracks, reports on and alerts on changes

Microsoft SharePoint, SharePoint Online/Office 365 and OneDrive for Business contain important and sensitive information, such as HR data, financial records and customer documentation. As SharePoint and OneDrive for Business grow, monitoring and auditing activity for compliance and security requirements becomes more critical. Unfortunately, many organizational policy violations go undetected because most security actions are not audited, which can result in lost productivity and system downtime. Moreover, because native tools can't prevent or even track site deletions, you could lose log data — defeating the purpose of auditing in the first place.

Quest® Change Auditor for SharePoint makes SharePoint, SharePoint Online/Office 365 and OneDrive for Business auditing faster, easier and much more secure. It centrally tracks, audits, reports and correlates changes and activity, whether on premises or in the cloud, in one secure database, and translates that raw data into intelligent, in-depth reports to protect against policy violations and deliver the governance organizations need today. With Change Auditor for SharePoint, you'll have confidence knowing that your organization can pass its next audit.

BENEFITS:

- Ensures a secure and compliant SharePoint, SharePoint Online/Office 365 and OneDrive for Business environment by tracking all critical changes and related events in real time
- Enables enterprise-wide auditing and compliance from a single client
- Stores all audit data, whether on premises or in the cloud, in one secure, centralized database
- Delivers faster time to resolution by enabling administrators to group, sort and filter search results
- Includes pre-configured, customizable reports that satisfy many auditor and management requests
- Reduces security risks with real-time alerts to any device for immediate response

Meet your audit requirements with Change Auditor for SharePoint. Get all related events on the who, what, when and where of each change, and add comments on why the change was made.

SYSTEM REQUIREMENTS

For complete system requirements, please visit quest.com/products/change-auditor-for-sharepoint.

AUDIT ALL CRITICAL CHANGES

Change Auditor for SharePoint provides extensive, customizable auditing and reporting for all critical changes to SharePoint, including configuration settings, permissions, farms, servers, site collections, lists, documents and users. The tool also enables you to track access and changes to sensitive files, as well as sensitive data moving in and out of OneDrive for Business. You'll get complete visibility into all changes over the course of time and in chronological order on who, what, when, where, why and workstation, including any related events with before and after values.

TRACK USER ACTIVITY AND REDUCE SECURITY RISKS

Change Auditor for SharePoint helps protect against system performance issues and unwanted security gaps by tracking user and administrator activity. You'll see exactly who accessed, deleted, moved, created or modified settings and data. And with real-time alerts to any device, you'll maintain constant awareness of any suspicious behavior and the ability to respond to threats as they occur.

TURN IRRELEVANT DATA INTO MEANINGFUL INFORMATION TO DRIVE SECURITY AND COMPLIANCE

Change Auditor for SharePoint eliminates guesswork analysis reporting by translating isolated cryptic data into a series of meaningful events. You'll instantly get all information on the change you're viewing and all related events, such as what other changes came from specific users. You will also gain a better understanding of event

trends with the ability to view, highlight and filter related events over the course of days, months and even years.

INTEGRATED EVENT FORWARDING

Easily integrate with SIEM solutions to forward Change Auditor events to Splunk, ArcSight or QRadar. Additionally, Change Auditor integrates with Quest® InTrust® for 20:1 compressed event storage and centralized native or third-party log collection, parsing and analysis with alerting and automated response actions to suspicious events.

AUTOMATE ROLE-BASED REPORTING FOR INTERNAL POLICIES AND MANAGEMENT REQUESTS

Change Auditor for SharePoint provides pre-configured and customizable reports with dashboards for auditors and management to view the information they need based on their level of access. This intuitive reporting eases workload on administrators and enables them to focus on other projects.

ABOUT QUEST SOFTWARE

Quest Software creates technology and solutions that build the foundation for enterprise AI. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of AI a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software.
