

Content Matrix

The industry's most powerful SharePoint migration solution.

Migrating from one SharePoint environment to another can quickly become a complicated and time-consuming project for any organization – especially if your project requires a move across multiple SharePoint versions. Organizations often consider the task to be a simple “lift-and-shift,” but in reality, these migrations are deeply complex, consume a tremendous amount of resources, and rely on detailed planning and processes to ensure a controlled and orderly transition. Compounded by increasing content sprawl, many SharePoint migrations end in failure, resulting in a massive loss of IT resources, budget, and time.

As you prepare for a SharePoint migration, it's critical that you ensure that the project covers everything from a pre-migration strategy to post-migration management.

Benefits:

- Minimize time and resources spent preparing your migration by automatically identifying migration roadblocks and solutions
- Ensure the flexibility and scalability to achieve a successful migration project
- Automatically tag SharePoint metadata to migrated content from third-party sources
- Meet the evolving needs of your business and its users by organizing your SharePoint environment on an on-going basis
- Migrate Nintex forms and workflows into your new SharePoint environment
- Accelerate merger and acquisition timelines

Content Matrix is the industry's most powerful SharePoint migration solution. Designed to migrate significant amounts of content from legacy SharePoint environments, Exchange public folders and Windows file shares into new SharePoint versions in one hop, Content Matrix enables optimal configuration and scalability to meet your migration needs and project timelines.

SYSTEM REQUIREMENTS

Supported target systems

- SharePoint Online (Microsoft 365)
- SharePoint Server Subscription Edition
- SharePoint Server 2019
- SharePoint Server 2016

Supported source systems

- SharePoint Server Subscription Edition
- SharePoint Server 2019
- SharePoint Server 2016
- SharePoint Server 2013
- SharePoint Foundation 2013
- SharePoint Server 2010
- SharePoint Foundation 2010
- Office 365-Dedicated (2013 & 2010)
- SharePoint Server 2007 & WSS 3.0
- Exchange Public Folders
- Windows File Shares (Local or Networked drives)
- Mapped network drives

Supported Operating Systems for Content Matrix Console

- Windows Server 2022
- Windows Server 2019
- Windows Server 2016
- Windows Server 2012 or 2012 R2
- Windows 11
- Windows 10

Features

Comprehensive migration and consolidation

Content Matrix migrates all your content from older SharePoint sites, Exchange public folders and Windows file shares into a new environment without incremental upgrades. Move metadata, customizations, workflows, permissions, information architecture and other attributes with zero downtime, fewer scripts, and more automation. Migrate lists, libraries, files, folders, attributes with attachments that include special characters, Nintex forms and Nintex workflows.

Distributed migration

Scale your high-speed SharePoint migration by automatically distributing workloads across any number of machines, running multiple migrations simultaneously. Ensure true project management capabilities by providing visibility across all of your migrations from a single console.

Restructure and reorganize

Keep complex SharePoint environments in order by restructuring and consolidating content with comparisons between source and target. As your business evolves — whether through growth, M&A or divestiture — your environment needs to evolve with it. Content Matrix helps you quickly restructure sites and consolidate content to keep users working without having to support unused, unnecessary or disparate farms and sites.

Optimized performance speed

Maximize the speed of your SharePoint migration. Content Matrix leverages a high-speed and high-fidelity migration of content from any previous version of SharePoint to achieve industry-leading migration speeds. With the incremental migration feature, you can skip settings and content that has already been migrated to shorten the timeline of your SharePoint migration project.

Modernized SharePoint pages and web parts

Simplify your move to modern SharePoint pages. Using a solution provided by the PnP community, Content Matrix converts classic SharePoint pages and its web parts to modern pages, including site level, list level and page level.

About Quest Software

Quest Software creates technology and solutions that build the foundation for enterprise AI. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of AI a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software. For more information, visit www.quest.com or follow Quest Software on X (formerly Twitter) and LinkedIn.
