

Enterprise Reporter for Active Directory

Active Directory and Azure Active Directory discovery and reporting across the enterprise

Microsoft Active Directory (AD) administrators today have a broad range of responsibilities, including supporting directory migrations, achieving and maintaining IT compliance, investigating security incidents, and maintaining proper separation of duties (SoD) — all with limited staff and budget. As organizations move to cloud and hybrid infrastructures, the job becomes even more challenging, since their Active Directory footprint expands as they have to also manage and secure Azure AD.

At any time, administrators need to be able to answer questions like the following:

- Who can do what in my Active Directory and Azure Active Directory?
- What users, groups and roles exist in my on-premises and cloud environments?
- Which user accounts can be safely deleted before migrating to a new domain?
- How has group membership changed over time for AD domain local and global groups?

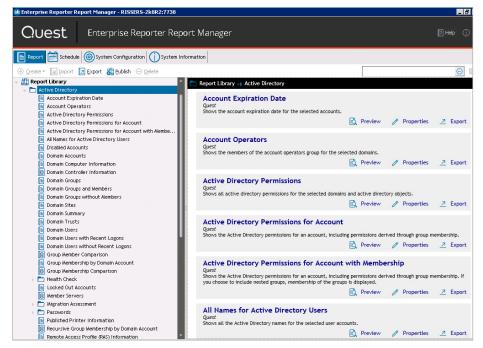

Figure 1: Enterprise Reporter for Active Directory reports on users, groups, group memberships, permissions and other critical objects residing in domains, forests and tenants.

BENEFITS:

- Delivers automated discovery and reporting on the configuration of Active Directory and Azure AD
- Enhances security and compliance by increasing visibility into Active Directory and Azure AD
- Provides pre-migration analysis to facilitate a smooth domain migration or consolidation project
- Facilitates AD historical analysis and compliance reporting by capturing the historical configuration of Active Directory and providing detailed change history reports
- Is scalable, secure and customizable to support large and complex Microsoft Windows environments with multiple groups of report consumers

SYSTEM REQUIREMENTS

For a complete list of system requirements, see the Release Notes.

BUILT-IN REPORTS BY CATEGORY

Health Check:

Active Directory Summary
Disabled Accounts

Locked out Accounts

Information for Users, Groups, Domains and more

Azure Active Directory:

Azure Tenant Information

Application Service Principals

Identities Membership and Roles

Azure Users, Roles, Groups, and Members

Users Connected with On-Premises AD

Migration Assessment:

Duplicate Domain (Computers, Groups, Users)

Matching (Computers, Groups, Users)

Passwords:

Changed/Expired/Older Passwords

Last Password Changed

Other:

Active Directory Permissions

Information for Users, Groups, Domains and more

Domain Information (accounts, computer, controller, groups and members)

Domain Users without Recent Logons

Group Membership Comparison

Enterprise Reporter for Active Directory provides deep visibility into AD users, groups, roles, organizational units (OUs) and permissions — as well as Azure AD users, groups, roles and application service principals. Armed with this information, organizations can perform security assessments, configuration change history reviews, and pre- and post-migration analyses, thereby enabling more informed strategic planning and proactive management of the entire IT infrastructure.

FEATURES

- Security and compliance visibility —
 Gain visibility into the configuration of critical IT assets in both AD domains and Azure AD tenants. Comprehensive reports provide the insight necessary to ensure security and compliance with internal policies and external regulations.
- Improved insights with IT Security.
 Search Correlate disparate IT data from numerous systems and devices into an interactive search engine for fast security incident response and forensic analysis. Include user entitlements and activity, event trends, suspicious patterns and more with rich visualizations and event timelines.

- Pre-migration assessment Plan for a smooth domain <u>migration or</u> <u>consolidation</u> project by pinpointing user and group dependencies, matching conflicts, and unused accounts before the migration starts.
- Delegated rights reporting Ensure appropriate AD and Azure AD delegation by reporting on who has access to AD domains and OUs, users, groups and computers, as well as Azure AD users, groups, roles, applications and permissions.
- AD change history Capture historical configuration information on AD users, groups, OUs and permissions, and view detailed change history reports. Gain indepth insight for historical analysis and compliance reporting.
- Scalable data collection Scale to AD environments of any size and geographic distribution. Schedule collections during off-peak hours to minimize the impact of data collection on network and server performance, and leverage the distributed collection architecture for load balancing.
- Efficient storage Reduce database storage requirements and save more change history data by comparing AD domain discoveries and storing only the changes.

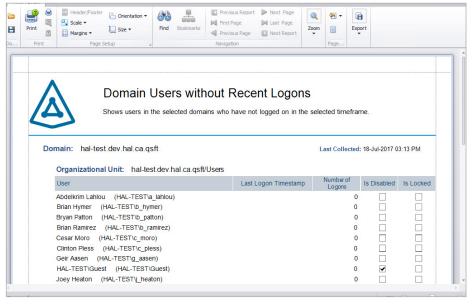

Figure 2: Enterprise Reporter for Active Directory can detect stale AD user accounts that have not recently logged on.

50 percent of surveyed IT organizations purchased Enterprise Reporter to solve Active Directory pre-migration planning and post migration analysis.

- Automated reporting workflows —
 Ensure stakeholders get the reports they need, when they need them, with automated report generation and flexible scheduling of report delivery.
- SoD Honor departmental and business function boundaries by enabling auditors, help desk staff, IT managers and other stakeholders to get exactly the reports they need and nothing more.
- Customizable reports Perform effective data analysis that meets the unique informational needs of your organization using predefined reports or creating new reports. Customize with advanced filtering and export multiple formats, including PDF, HTML, MHT, RTF, XLS, XLSX, CSV, text and images.
- Common reporting portal Export reports to our <u>software knowledge</u> <u>portal</u> for a unified reporting interface across the entire family of Quest <u>security</u> and <u>compliance solutions</u>.

ABOUT QUEST SOFTWARE

Quest Software creates technology and solutions that build the foundation for enterprise Al. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of Al a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software. For more information, visit www.quest.com or follow Quest Software on X (formerly Twitter) and LinkedIn.
